SUBJECT INDEX

"Arrow pushing"
The art of "arrow pushing": is the hyperconjugation model theoretically justified?, 205

Benzene molecule
Has the benzene molecule an extra stability?, 197
Bonding in B_2H_6
On the bonding in B_2H_6 and the lone pairs in H_2O: the use of localized molecular orbitals in spin-coupled calculations, 155

Cluster expansion
Ab initio valence bond cluster expansion for an alternating infinite chain of hydrogen atoms, 103
Conjugated-circuit model
Quantum-mechanical and computational aspects of the conjugated-circuit model, 63

Fully benzenoid systems
Fully benzenoid systems revisited, 139

$HCN \rightarrow CH + N$
The ab initio spin-coupled description of the process $HCN \rightarrow CH + N$, 279
H_n systems
The transferability of effective exchange integrals in the non-empirical effective valence bond hamiltonian: a minimal basis study of H_n systems, 219
Hybrids and bond formation
Hybrids and bond formation: excursions in momentum space, 189
Hydrogen atoms
Ab initio valence bond cluster expansion for an alternating infinite chain of hydrogen atoms, 103
Hyperconjugation model
The art of "arrow pushing": is the hyperconjugation model theoretically justified?, 205

Hypercoordination
Aspects of hypercoordination and one-electron delocalizations via increased-valence structures, 39

Increased-valence structures
Aspects of hypercoordination and one-electron delocalizations via increased-valence structures, 39

Lone pairs in H_2O
On the bonding in B_2H_6 and the lone pairs in H_2O: the use of localized molecular orbitals in spin-coupled calculations, 155

Momentum space
Hybrids and bond formation: excursions in momentum space, 189

Non-orthogonal matrix elements
On the evaluation of non-orthogonal matrix elements, 115
Non-orthogonality problem
On the historical development of the valence bond method and the non-orthogonality problem, 1

One-electron delocalizations
Aspects of hypercoordination and one-electron delocalizations via increased-valence structures, 39
Oxygen double bond
On the nature of the oxygen double bond, 29

Pariser–Parr–Pople hamiltonian
Valence bond approach to the Pariser–Parr–Pople hamiltonian and its application to simple π-electron systems, 249

Resonance structures
A generalized method for the superposition of resonance structures, 91

Resonating valence bond
On the enumeration of basis functions for a double chain of $S=1/2$ ions: a resonating valence bond problem, 15

$S=1/2$ ions
On the enumeration of basis functions for a double chain of $S=1/2$ ions: a resonating valence bond problem, 15

Simple π-electron systems
Valence bond approach to the Pariser-Parr-Pople hamiltonian and its application to simple π-electron systems, 249

Single bonds
Covalent, ionic and resonating single bonds, 163

Transferability
The transferability of effective exchange integrals in the non-empirical effective valence bond hamiltonian: a minimal basis study of H_n systems, 219

Valence bond hamiltonian
The transferability of effective exchange integrals in the non-empirical effective valence bond hamiltonian: a minimal basis study of H_n systems, 219

Valence bond method
On the historical development of the valence bond method and the non-orthogonality problem, 1
